ACCESS SERVICE

4. SWITCHED ACCESS SERVICE (Cont'd)

4.2 Provision and Description of Switched Access Service Feature Groups (Cont'd)

4.2.2 Entrance Facilities and Direct Trunked Transport

(A) Description

(1) DS1 Facility

A DS1 facility provides for the transmission of up to 24 Voice Grade equivalent channels. The actual bit rate and framing formats are a function of the channel interface selected by the customer. A DS1 Entrance Facility is provided between a customer designated premises or a collocated interconnection location and the serving wire center of the customer premises or a collocated interconnection location. In those instances where the Telephone Company may be unable to provide Entrance Facilities to the serving wire center of the customer premises or a collocated interconnection location, the Telephone Company will provide the service to a mutually agreed upon wire center. Mileage will be measured based on the V & H coordinates of the customer's appropriate serving wire center and not the alternate wire center the customer is actually served from. A DS1 Direct Trunked Transport facility may be provided between the serving wire center of the customer designated premises or a collocated interconnection location and an end office, access tandem or Telephone Company multiplexing Hub. DS1 Direct Trunked Transport may also be provided between a Hub and an end office or access tandem.
