ACCESS SERVICE

4. SWITCHED ACCESS SERVICE (Cont'd)

4.2 Provision and Description of Switched Access Service Feature Groups (Cont'd)

4.2.2 Entrance Facilities and Direct Trunked Transport (Cont'd)

(A) Description (Cont'd)

(2) DS3 Facility (Cont'd)

At the option of the customer, a DS3 facility may be provided with an optical interface at four levels of capacity, (i.e., as three (135 Mbps), nine (405) Mbps), twelve (560 Mbps) groups) or forty eight (2.488 Gbps) DS3 facilities. The customer may order a minimum of 1 and a maximum of 3 DS3 facilities for the 135 Mbps capacity; a minimum of 2 and a maximum of 9 DS3 channels for the 405 Mbps capacity; a minimum of 2 and a maximum of 12 DS3 channels for the 560 Mbps capacity; or a minimum of 7 and a maximum of 48 DS3 channels for the 2.488 Gbps capacity. The Optical DS3 may be provided as an Entrance Facility between a customer designated premises and the serving wire center of the customer designated premises subject to the availability of facilities. In those instances where the Telephone Company may be unable to provide Entrance Facilities to the serving wire center of the customer premises, the Telephone Company will provide the service to a mutually agreed upon wire center. Mileage will be measured based on the V&H coordinates of the customer's appropriate serving wire center and not the alternate wire center the customer is actually served from.

The customer must provide Optical Line Terminating Multiplexing Equipment (OLTM) in lieu of Telephone Company provided digital optical equipment. Within each capacity level, individual DS3 facilities will be derived from OLTM equipment at the serving wire center of the customer designated premises. The customer provided OLTM must be compatible with the OLTM equipment employed by the Telephone Company as listed below.
