## ACCESS SERVICE

### 4. SWITCHED ACCESS SERVICE (Cont'd)

#### 4.1 General (Cont'd)

##### 4.1.1 Feature Group Arrangements and Manner of Provision (Cont'd)

###### (B) 800 Data Base Access Service (Cont'd)

No access code is required for 800 Data Base Access Service. When an 800 call is originated by an end user, the Telephone Company will perform the customer identification function based on the dialed digits to determine the customer location to which the call is to be routed. The customer identification will be based on 10 digits (i.e., 800-NXX-XXXX), however, for certain special use 800-NXXs, the customer identification will be based on six digits (i.e., 800-NXX). The customer identification function will be available at suitably equipped end office or access tandem switches. If the call originates from an end office not equipped to provide the customer identification function, the call will be routed to an access tandem at which the function is available. Once customer identification has been established, the call will be routed to the customer. Calls originating from an end office switch not included in the customer's area of service for 800 Data Base Access Service will not be completed.

For purposes of administering the rules and regulations set forth in this tariff regarding the provision of 800 Data Base Access Service, except where otherwise specified, the term 800 Data Base Access Service shall include any of the following NPAs: 800, 888, 877, 866, 855, 844, 833, and 822 as they become available to the industry.
