ACCESS SERVICE

4. SWITCHED ACCESS SERVICE (Cont'd)

4.7 Rate Regulations (Cont'd)

4.7.10 Facility Hubs (Cont'd)

Cascading multiplexing occurs when a DS1 or DS3 facility is de-multiplexed to provide channels with a lesser capacity and one of the lesser capacity channels is further de-multiplexed. For example, a DS3 facility is de-multiplexed to twenty-eight DS1 channels and then one of the DS1 channels is further de-multiplexed to twenty-four Voice Grade channels.

When cascading multiplexing is performed, whether in the same or a different Hub, a charge for the additional multiplexing unit also applies. When cascading multiplexing is performed at different Hubbing locations, Channel Mileage rates also apply between Hubs.

4.8 Rates and Charges

Rates and Charges for Switched Access Service are found in Section 5.6 following.
