NIAGARA MOHAWK POWER CORPORATION  
INITIAL EFFECTIVE DATE: OCTOBER 21, 2013

LEAF: 168  
REVISION: 1  
SUPERSEDING REVISION: 0

#### GENERAL INFORMATION

#### 34. ECONOMIC DEVELOPMENT PROGRAMS: (Continued)

##### 34.2 Program 1 - Economic Development Rider (EDR) (Continued)

##### 34.2.3 Alternate Billing Methodology: Non-Separated Loads (Continued)

34.2.3.2 The eligibility criteria as expressed in Rules 34.2.1 and 34.3.1 must be met in the current month's billing period in order for the customer to receive the Economic Development discount in the current month's bill. When the current billing period's metered units do not exceed the base period units by the minimum threshold limits as expressed in Rules 34.2.1 and 34.3.1, then no Economic Development discount shall be applied to the current month's bill.

In order to be eligible for Economic Development Program benefits, customers who subscribe to the Alternate Billing Methodology must register metered usage (demand, on-peak energy, off-peak energy, and total energy) in excess of the base period billing units. When the current month's metered units exceed the base period's units by the minimum threshold limits as expressed in Rules 34.2.1 and 34.3.1 EDR or EZR units shall be identified and eligible for the appropriate Economic discount according to Rules 34.2.2.3 and 34.3.4, respectively. Assuming the minimum thresholds have been met, the demand, RkVA, and energy will be accounted for according to the following rules:

34.2.3.2.1 The Company billing demand for non-EDP or EZR Service shall be the lesser of the base period demand and the current month's demand. All metered demand in the current billing period which is in excess of the base period demand shall be considered EDR or EZR demand and shall be eligible for the appropriate Economic Development discount.

34.2.3.2.2 The Company billing reactive demand, for non-EDP or EZR Service shall be the lesser of the base period reactive demand and the current month's reactive demand. All metered reactive demand in the current billing period which is in excess of the base period reactive demand shall be considered EDR or EZR reactive demand and shall be eligible for the appropriate Economic Development discount.

34.2.3.2.3 All metered energy in the current billing period which is in excess of the base period's metered energy shall be considered EDR or EZR energy. If the Economic Development recipient is billed on Niagara Mohawk's Large General Service Time of Use Classification (P.S.C. No. 220 S.C. 3-A), the metered on-peak energy and off-peak energy must both be in excess of the base period's metered on-peak and off-peak energy respectively, to be considered EDR or EZR energy and to be eligible for the appropriate Economic Development discount.
