**SECTION 2**  
**RULES AND REGULATIONS**

**2.14 Timing of Calls**

- 2.14.1** On Prepaid Calling Card calls, billing begins only when a starting and ending event both occur. Timing is calculated at the starting event and ends at the terminating event. If there is no terminating event, there is no charge. Time between the starting event and the termination event is the call duration. The starting event occurs when the Platform experiences an incoming signaling protocol successfully, i.e., upon seizure of an inbound trunk. The terminating event occurs when the Platform receives a signal from the LEC that the calling party has terminated the call or when the special audio text and interactive voice response features of the Platform such as news, weather, voice mail, etc. have been accessed by the End User and completed. If the called party hangs up and the Customer re-originates one or more calls utilizing the interactive Platform program features without re-dialing the toll-free access number, the terminating event occurs when the Platform receives a signal from the LEC that calling party hangs up. If the End User of a Prepaid Calling Card call uses the conference feature, the third leg of the call is timed separately. Timing of the third leg of the call begins when the called station answers and terminates when the called station hangs up.
- 2.14.2** On direct-dialed calls, chargeable time begins when the called station answers and the connection is established between the calling station and the called station, miscellaneous common carrier, mobile radio system, or PBX system. Answer detection is determined on standard industry answer detection methods, including hardware and software answer detection. Chargeable time ends when the calling station hangs up thereby releasing the network connection. If the called station hangs up but the calling station does not, chargeable time ends when the network connection is released by the automatic timing equipment in the telecommunications network.
