### 3.2.2 Local Transport

The Local Transport rate category provides the transmission facilities between the Customer premises and the end office switch(es) where the Customer traffic is switched to originate or terminate its communications.

Local Transport is a two-way voice frequency transmission path composed of facilities determined by the Company. The two-way voice frequency path permits the transport of calls in the originating direction (from the End User end office switch to the Customer's premises) and in the terminating direction (from the Customer premises to the end office switch), but not simultaneously. The voice frequency transmission path may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

The Company will work cooperatively with the Customer in determining (1) whether the service is to be directly routed to an end office switch or through an access tandem switch, and (2) the directionality of the service.

#### A. Transmission Paths

The number of Transport transmission paths provided is based on the Customer's order and is determined by the Company.

#### B. Interconnection

Interconnection of non-Company switched access transport facilities is available between an end office and a Customer point of presence where such facilities are provided.

### 3.2.3 800 Database Access Service

When a 1+800+NXX-XXXX call is originated by an end user, the Company will utilize the Signaling System 7 (SS7) network to query an 800 database to perform the identification function. The call will then be routed to the identified customer. The manner in which 800 database access service is provided is dependent upon the availability of SS7 service at the end office from which the service is provided as outlined following:

Service Switching Point (SSP) capability for querying centralized databases, all such service will be provisioned from that end office.

When 800 database access service originates at an end office not equipped with SSP customer identification capability, the 800 call will be delivered to the access tandem on
