PSC No: 19 - Electricity
 Rochester Gas and Electric Corporation
 Initial Effective Date: June 19, 2015

Leaf No. 201
 Revision: 1
 Superseding Revision: 0

SERVICE CLASSIFICATION NO. 8 (Cont'd)
LARGE GENERAL SERVICE - TIME -OF-USE RATE (Cont'd)

SPECIAL PROVISIONS: (Contd.)

8. NYISO Emergency Demand Response Program Rider
 b) Emergency Demand Response Period Notification

The Company will notify Customers served under this Rider when the NYISO declares an emergency, in accordance with Attachment G to NYISO's Services Tariff. Notice shall be provided by telephone, e-mail, facsimile and/or other electronic means, as agreed upon by the Company and the Customer. Notification will occur approximately 2 hours prior to the need for load reduction by Customers. The Company shall endeavor to provide earlier notification when possible, but shorter notification periods may be necessary. The Company will also notify customers served under this Rider when the NYISO declares the emergency to be over. Reductions to the load served by the Company by Customers under this Rider in response to NYISO-declared emergencies will be voluntary. In order to receive payments under this Rider, Customers must be able to demonstrate that their load curtailment or operation of emergency generating equipment was in effect for the entire period of each NYISO-declared emergency. The Customer shall designate in writing an authorized representative and an alternate representative to receive the notice.

- c) Rates and Payments

Customers taking service under this Rider will pay the rates and charges that would otherwise be applicable under this service classification and will be subject to all other terms and conditions of this service classification. The Company will make payment for load reductions to a Customer taking service under this Rider and for which the Company can verify load reduction during the Emergency Demand Response Periods. Upon Company verification of load reduction, the Company shall pay the Customer at least 90% of the NYISO payment for each event. The NYISO payment will be the higher of \$500 per MWh or the zonal real-time Locational-Based Marginal Price (LBMP) per MWh of demand reduced. If NYISO activates the EDRP for four hours or less, the NYISO will pay the higher of \$500 per MWh or the zonal real-time LBMP per MWh of demand reduced, for the duration of the EDRP activation or two hours, whichever is greater.

The load reduction in each hour for which payment will be made under this Rider will be measured in accordance with the CBL methodology contained in the NYISO EDRP Operating Manual.

- d) Metering and Meter Data Provision

The customer shall have installed the necessary equipment, including interval metering at each participating meter location. A participating customer with a generator also will require a separate interval meter to verify curtailment is not supplied by that generator. Such metering will be installed, controlled, operated and maintained by the Company at the customer's expense. Participating customers will be responsible for only those metering costs not covered by discounts provided by NYSEERDA, or any other non-Company source. Regardless of which Demand Reduction Provider the customer may choose, the Company may require installation of additional communication equipment, and an internet based software subscription service necessary for the determination of CBL and for the administration of this and any other curtailment program (e.g., Emergency Demand Response Program). This subscription service will also provide the customer with the ability to review and monitor their energy consumption patterns on a daily basis. The customer is responsible for making adequate arrangements with their telecommunications provider for communication equipment. The Company's monthly charge for the software subscription service is \$40 per month. Customers receiving metering from competitive metering providers may participate in this program using metering equipment and communications capabilities that the Company has determined can provide the necessary hourly interval usage data.
