**RE: Tariff Proposals to Preclude Dual Market Participants from Receiving Duplicative Compensation in both Wholesale and Retail Markets Concurrently and Other Conforming Changes in Connection with the New York Independent System Operator's Implementation of FERC Order Nos. 2222 and 841**

Dear Secretary Phillips:

Orange and Rockland Utilities, Inc. (the "Company") is filing with the Public Service Commission (the "Commission") amendments to its Schedule for Electric Service, P.S.C. No. 3 – ELECTRICITY (the "Electric Tariff"). The revised Electric Tariff leaves, which are identified below, are filed to become effective on July 1, 2023.

<u>Leaf No.</u>	<u>Revision No.</u>	<u>Superseding No.</u>

249.1	5	4
328.1	0	

**Reason for Filing**

On September 17, 2020, FERC issued Order No. 2222, that aimed to remove barriers for distributed energy resources ("DER") to participate in the wholesale markets that it

Honorable Michelle L. Phillips  
September 30, 2022  
Page 2 of 5

regulates.<sup>1</sup> To address these barriers, Order No. 2222 required each regional transmission organization (“RTO”) and independent system operator (“ISO”) under FERC’s jurisdiction to revise its tariff to establish DER aggregators as a type of market participant that can register under one or more participation models contained in the RTO/ISO tariff that accommodates the physical and operational characteristics of each DER aggregation.<sup>2</sup> Of particular relevance to this filing, Order No. 2222 allows DER to simultaneously participate in RTO/ISO markets and retail programs (i.e., dual participation) but also allows RTOs/ISOs to exclude participation of DER that are receiving compensation for the same services as part of another program.<sup>3</sup> Similarly, FERC Order No. 841 directed RTOs/ISOs to remove barriers to the participation of electric storage resources, including those interconnected to distribution facilities, in wholesale markets.<sup>4</sup> Importantly, FERC found that wholesale purchases and sales by electric storage resources (i.e., for charging and discharging) must be at the wholesale locational marginal price regardless of which participation model the electric storage resource uses to participate.<sup>5</sup>

One of the overarching principles of FERC Order No. 2222 is that dual participating customers must not receive compensation concurrently for the same service, such as compensation received for the sale of energy and capacity, in the retail markets that they are receiving in the wholesale markets. Order No. 2222 specifically prohibits double counting or double compensation of services provided by DERs.<sup>6</sup> In compliance with Order No. 2222 directives, the New York Independent System Operator (“NYISO”) proposed revisions to its Market Administration and Control Area Services Tariff (“Services Tariff”) and Open Access Transmission Tariff (“OATT”), which FERC accepted subject to a further compliance filing on June 17, 2022.<sup>7</sup> On the topic of dual participation and the potential for double counting of services, NYISO proposed in its first compliance filing to revise Section 4.1.10.6 of its Services Tariff to prohibit an aggregator from enrolling a new DER that “provides the same or substantially similar service in a retail market or program” that it provides in the NYISO-administered markets.<sup>8</sup> Subsequently, FERC accepted NYISO’s proposed revisions on double counting but directed NYISO to delete the wording “or substantially similar” in a further compliance filing.<sup>9</sup> NYISO’s Services Tariff only requires the DER aggregator, as part of the registration process, to affirm through an attestation that the DER is not providing the same service to a retail market or program.

Similar to the intent of NYISO’s provision to prevent double counting of services, the Company’s proposed revisions clarify customer eligibility to participate in its DER retail programs when such DER also participate in the NYISO markets, to prevent duplicative compensation for the same service. In addition to avoiding duplicative compensation issues,

---

the Company seeks to maximize dual participation opportunities for customers by proposing a new option for Value Stack Customers to receive payment for the energy and capacity from the NYISO but continue to be eligible to receive the applicable Value Stack non-energy and non-capacity compensation from the Company (i.e., the Environmental Component, Market Transition Credit (“MTC”) Component, Demand Reduction Value (“DRV”) Component, Locational System Relief Value (“LSRV”) Component, and the Community Credit Component). This new option, the Wholesale Value Stack (“WVS”), is identical to the Value Stack except, unlike Value Stack Customer-generators, WVS Customer-generators will receive energy payments and capacity payments, as applicable, from the NYISO either directly or through an aggregation in lieu of payment from the Company, thus, preventing duplicative compensation and providing Customer-generators additional optionality if they elect to participate in the NYISO markets.

### **Proposed Tariff Changes**

The Company is proposing several changes to its Electric Tariff to allow dual participation and deter duplicative compensation. Specifically, the Company proposes the following amendments to its programs that compensate customer-generators for exporting:

- Rider N - Net Metering and Value Stack Tariff for Customer-Generators: the Company added the aforementioned new WVS as a new sub-section under Rider N. New WVS customers must still meet all the eligibility requirements applicable to Value Stack customers and may still receive the non-energy and non-capacity compensation they would have received under the Value Stack but will now receive energy and capacity payments from the NYISO in lieu of the Value Stack Energy and Capacity components. The Company included timing restrictions regarding switching between retail and wholesale service tariffs to accommodate the NYISO’s capability planning year processes. A sentence was placed in both the Value Stack Energy Component and the Value Stack Capacity Component Sections of Rider N to reinforce that WVS customers do not receive compensation for the energy or capacity components that Value Stack customers receive. In addition, this filing adds clarifying language to explain the rules for customers returning to the Value Stack after having been on WVS versus customers not previously enrolled in the Value Stack who are switching from WVS to the Value Stack, as far as compensation election and eligibility election dates, rates, and terms.
- Grandfathered Net Metering and Phase One Net Metering customers cannot “dual” participate in both the Company’s and NYISO’s programs. Any type of NEM customer wishing to participate in wholesale markets must give up its NEM status and opt into WVS.
- SC 15 Buyback Service customer-generators cannot “dual” participate in both the Company’s and NYISO’s programs. Any Buyback customer-generators must forgo the SC 15 Buyback Service tariff and take Wholesale Distribution Service pursuant to Attachment L of the Company’s OATT with FERC.<sup>10</sup> The Company included timing restrictions regarding switching between retail and wholesale service tariffs to accommodate NYISO’s capability planning year processes.

---

<sup>10</sup> The Company will be filing Attachment L to the Company’s OATT next year as described further in the Requested Effective Date and Commission Action Date section of this letter.

Honorable Michelle L. Phillips  
September 30, 2022  
Page 4 of 5

- Rider E - Commercial System Relief Program, Rider F – Distribution Load Relief Program, and Rider P - Term and Auto Dynamic Load Management Program customers can “dual” participate in both the Company’s and NYISO’s programs. The Company added Wholesale Distribution Service (“WDS”) to the definition for Load Relief and Electric Generating Equipment in these riders.

The Company also proposes other tariff changes as follows:

- The Company added the definition for Wholesale Distribution Service.
- Payments made under WVS will be recovered in the same manner as payments made to Value Stack customers are recovered, which is detailed in General Information Section No. 16.5, Value of Distributed Energy Resources (“VDER”) Cost Recovery.
- General Information Section No. 24 - Standby Service and Standby Service Rates was updated to state that customers with stand-alone Electric Energy Storage systems charging for wholesale participation purposes will be billed pursuant to Attachment L of the Company’s OATT on file at FERC in accordance with FERC Order No. 841.<sup>11</sup>

#### **Requested Effective Date and Commission Action Date**

The NYISO has stated it expects DER aggregator registration to begin in the second quarter of 2023 but that aggregators are not expected to transact in the NYISO markets until approximately August 2023. Accordingly, the Company is respectfully requesting that the Commission accept the proposed modifications to its Electric Tariff with an effective date of July 1, 2023 to ensure that these tariff provisions are in effect prior to the date that customers may commence transacting in the NYISO markets pursuant to Order No. 2222. Further, the Company respectfully requests that the Commission issue an order on the merits of this filing in the first quarter of 2023 but no later than April 1, 2023, in order to ensure the Company has sufficient time to file a WDS option under its existing OATT. The WDS option will be filed with FERC as Attachment L to the Company’s OATT.

Attachment L of the Company’s OATT will set forth the rates, terms and conditions of service in providing WDS to customers. Because the Company anticipates providing WDS to DER customers who choose to participate in the NYISO markets, the Company will need to file a WDS to reflect the expansion of services contemplated by Order No. 2222. The Company anticipates that it will propose reciprocal, clarifying, and preclusive language in Attachment L of its OATT to be filed with FERC to mirror the relevant language in the state retail tariffs proposed in this filing. Similar to this filing, the Company anticipates seeking a July 1, 2023 effective date for the Attachment L filing at FERC. To provide WDS and appropriately charge customer-generators for this delivery service when DER may commence transacting in the NYISO markets, a WDS option must be in place. In accordance with FERC’s 60-day prior notice requirement,<sup>12</sup> the Company must submit this filing to FERC by May 1, 2023, absent having sufficient grounds for waiver.

The Commission’s disposition of this filing in advance of submitting a WDS option with FERC will ensure that there is no disconnect between the Company’s Electric Tariff provisions

---

<sup>11</sup> Order No. 841 at P 289. Although not yet on file with FERC at the time of this filing, the Company will file its proposed WDS with FERC next year as part of its OATT next year.

<sup>12</sup> 18 C.F.R. § 35.3(a)(1).

Honorable Michelle L. Phillips  
September 30, 2022  
Page 5 of 5

and its proposed WDS option that it will file at FERC. For this reason and to permit sufficient time for the Company to finalize its FERC filing in light of the Commission's order in this proceeding, the Company is respectfully requesting that the Commission issue an order on the merits of this filing in the first quarter of 2023 but no later than April 1, 2023.

### **Conclusion and Notice**

The Company is filing changes to its Electric Tariff to become effective on July 1, 2023. The Company respectfully request the requirements of Section 66(12)(b) of the Public Service Law and 16 NYCRR Section 720-8.1 regarding newspaper publication be waived as these changes will be communicated to customers through a post on the Company's website. Included is a proposed form of Notice of Proposed Rule Making for publication in the State Register pursuant to the State Administrative Procedures Act.

Very truly yours,

/s/

William A. Atzl, Jr.  
Director – Rate Engineering
