7. OBSOLETE SERVICE OFFERINGS

7.1 Progress Telecom, LLC Rates and Services [GRANDFATHERED]

Level 3 Communications, LLC has acquired Progress Telecom, LLC. The services that Progress Telecom, LLC customers (“Progress Customers”) were receiving as of December 31, 2008 under the Progress Telecom, LLC (“Progress Tariff”) will continue to be provisioned to the Progress Customers and are grandfathered as services and rates into this tariff. Neither Progress Customers nor customers of Level 3 Communications, LLC are permitted to order services from the Progress Tariff. Any new or additional services required by Progress Customers after December 31, 2008 will only be available from the Level 3 Communications, LLC service and rate sections in this tariff.

7. OBSOLETE SERVICE OFFERINGS

7.2 Dedicated Access Services

A. Grandfathered Services

1. DS1 Hub Service

DS1 Hub Service allows a customer to aggregate up to 28 DS1 channels that terminate in the same location into a single DS3.

2. DS0 Service

(a) DS0 Services are Digital Channels furnished by the Company at transmission speeds of 2.4 kbps, 4.8 kbps, 9.6 kbps, 19.2 kbps, 64 kbps, or in multiples of 64 kbps up to 1.544 Mbps. Such channels will be configured by the Company to transmit digital data at specified data rates or analog signals converted to digital signals, as described below. Interconnections to such channels and equipment interfacing to such channels shall meet the technical characteristics described below in connection with each service configuration. The NCI Codes referenced below are defined in Bell Communications Research (Bellcore) publication TR-NPL-000335.

(b) Each DS0 channel will be provided in one of the following configurations, as specified by the Customer.

3. Effective 2-Wire Service

Provides a digital transmission channel capable of normally carrying, among other information, the digitized representation of human speech. At the Company's point of interconnection with the User, the service will have the technical characteristics of a standard 2-wire analog telephone circuit. Specific configurations are as follows:

7.2 Dedicated Access Services

A. Grandfathered Services (Cont'd)

1. 2-Wire Transmission Only

2-wire, 600 ohm, open loop (continuously connected) with industry standard demarcation (NCI Code: 02NO2). C4 conditioned circuit connecting two locations, typically used for voice-grade data services.

2. Digital Services

Provides a digital transmission channel capable of normally carrying synchronous digital data signals. The following service configurations are available:

3. 64 Kbps Data Service

A 4-wire 135ohm handoff. Other possible handoffs are RS232/DB25, RS422/DB25, or V.35. Provides point-to-point, 64 Kbps clear channel for a full-duplex synchronous data circuit. No error correction or in-band control codes are supported. (Possible NCI Code: 04DU5-64).

4. DS1 Hub Service

DS1 Hub Service allows a customer to aggregate up to 24 DS0 channels that terminate in the same location into a single DS1 and the distribution of End Link circuits.
