## SECTION 3 - SWITCHED ACCESS SERVICE

### 3.1 GENERAL

Switched Access Service, which is available to Customers for their use in furnishing their services to End Users, provides a two-point electrical communications path between a Customer's premises and an End User's premises. It provides for the use of common terminating, switching and trunking facilities, and for the use of common subscriber plant of the Company. Switched Access Service provides for the ability to originate calls from an End User's premises to a Customer's premises in the LATA where it is provided.

The application of rates for Switched Access Service is described in Sections 3.5 and 3.6 following. Rates and charges for services other than Switched Access Service, e.g., a Customer interLATA toll message service, may also be applicable when Switched Access Service is used in conjunction with these other services.

### 3.2 TRAFFIC TYPE DESIGNATION

The Company affirms that all of its New York traffic either originates from or terminates to a VoIP end user and is, therefore, VoIP-PSTN and is billed under the rates and terms set forth in the Company's FCC No. 2 Tariff on file with the Federal Communications Commission.
